

# **SUSTAINABLE FOREST MANAGEMENT**

Aim: This project aims to explore the politics and economics of different forest management practices that have ecological, economic, and social impacts.

Goal: The goal is to explore, through policy-making analysis, economic modelling, as well as simulations, the prospects for developing forestry models that will balance economic, ecological, and social sustainability.

Activities and deliverables: The students will be involved in data collection, literature surveys, simulations, and other forms of analysis.
