

Rules for IT security

An authorized user is anyone who has been given a user account by the university. The user account is accessed with a username and a password, or some other authentication method. The user account is connected to one or more storage areas, and gives access to several IT systems.

- The user account is strictly personal and may not be used by any other person.
- The user account will be closed when the user no longer studies or works at the university. University West can delete a user account and its data, that has been inactive for more than 6 months.
- It is not permitted to sabotage the system, or by other means deny other users access to the system.
- It is not permitted to use misconfigurations, program errors or other methods to obtain extended system authorization.
- It is not permitted to use the university's systems to try to sabotage or gain illegal access to external systems.
- If you discover errors, sabotage, security breaches or other problems, report them to the Servicecenter as soon as possible.
- University West will not be responsible for consequences of the unavailability of IT-resources.
- Only computers owned by the university may be connected to the university's computer communication network.
- All other established guidelines and rules for IT-security at University West apply.
